#### **KEYWORDS:**

Alopecia areata, Indraluptham. Prachana.

Alopecia areata is an autoimmune disease condition characterized by patchy, non-scarring hair loss due to immune-mediated damage to hair follicles. It commonly affects the scalp, beard, and moustache areas, with exclamatory hairs often visible at the lesion margins. The condition usually manifests between the second and fourth decades of life and is influenced by genetic, environmental, and psychological factors. In Ayurveda, alopecia areata is correlated with Indralupta explained under Kapalagata Roga by Acharya Vagbhata and Kshudra Roga by Acharya Sushruta. Indraluptha is occurs due to the vitiation of Vata and Pitta doshas in the hair root (Romakoopa), leading to hair fall, followed by Kapha and Rakta doshas obstructing regrowth. Prachana, a type of Raktamokshana (bloodletting), is considered the first line of treatment. In this case study, a 20-year-old male with Alopecia areata was successfully treated with Ayurvedic Shodhana (purificatory) and Shamana (pacifying) therapy. Complete hair regrowth and symptom relief without recurrence were the outcomes of the treatment. This result emphasizes how Ayurvedic treatments can provide a comprehensive and long-lasting strategy for treating alopecia areata by addressing its underlying causes and reestablishing systemic equilibrium.

#### INTRODUCTION

Alopecia Areata (AA) is a chronic, autoimmune disorder characterized by localized, non-scarring hair loss, predominantly affecting the scalp but potentially involving any hair-bearing area of the body.[1] It affects approximately 2% of the global population and about 0.7% in India. The condition can affect individuals irrespective of age, gender, or ethnicity, often leading to significant psychological distress due to its unpredictable course and visible manifestation<sup>[2]</sup>. The pathogenesis of AA involves a complex interplay of genetic, environmental, and immunological factors. Central to its mechanism is a T-cell-mediated type IV hypersensitivity reaction, where the immune system targets anagen hair follicles. Various triggers such as psychological stress. infections. and genetic susceptibility contribute to disease onset and progression<sup>[3]</sup>. Modern medical treatments, including topical and systemic corticosteroids, immunotherapy, and minoxidil, offer symptomatic relief but are often

associated with recurrence and limited long-term efficacy. Several studies have explored immunological basis of AA, emphasizing its autoimmune nature and the role of cytokines and immune cells in follicular damage. However, despite advancements in immunomodulatory therapy, there remains a gap in achieving sustained remission, which necessitates exploration of alternative and holistic approaches. In Ayurvedic science, AA is closely correlated with Indralupta, as described in classical texts. The Samprapti involves vitiation of Pitta and Vata doshas in the Romakoopa (hair follicles), leading to hair fall, with secondary involvement of Kapha and Rakta doshas that inhibit regrowth<sup>[4]</sup>. The primary treatment advocated is *Raktamokshana* (bloodletting), followed by external applications (Lepanas) to restore follicular health and promote regrowth.[5]

#### Case study

Presenting complaint: Patchy hair loss on the posterior scalp for 1 month.

# History of presenting complaint

The patient noticed a small, round, smooth patch of hair loss on the vertex region of the scalp about one month ago. The patch gradually increased in size over two weeks. The affected area is:

4.0

- Non-itchy
- Non-painful
- Not associated with redness, scaling, oozing, or inflammation
- No previous history of similar hair loss was reported.

# **Past Medical and Surgical History**

- No history of systemic illness (e.g., diabetes, thyroid disorders, autoimmune disease).
- No surgical history

# **Personal History**

- Diet: Irregular food habits
- Appetite: Normal
- Bowel habits: Normal
- Sleep: Disturbed due to academic stress
- Addictions: None

# **Family History**

No family history of autoimmune, dermatological, or thyroid disorders.

# **Allergic History**

No known drug or food allergies

## **General Examination**

Vital Signs: Within normal limits

Pallor, Icterus, cyanosis, Clubbing: Absent

Lymphadenopathy: Not detected

# **Local Examination (Scalp)**

- One or more round, smooth, clearly demarcated patches of hair loss on the occipital area
- Size: 6 cm diameter
- No erythema, scaling, discharge, or scarring

- Hair pull test: positive at the periphery
- Exclamatory hairs: present

# **Blood investigation**

- Hb- 14.5gm%
- ESR 9mm at 1 hr
- TWBC- 7440 cells/cmm
- FBS 91 mg%
- TRBC- 4.5 million/cmm
- T. Cholesterol 165 mg%
- T. Platelet count- 2.93 per
- microliter Ca 9.2 mg%
- AEC 500 cells/cmm
- TSH- 1.03 milli IU/l
- BT 3min 10 sec
- CT 7min 0.02 sec
- HIV Test- Negative
- HBsAg- Negative
- VDRL- Negative
- HCV- Negative

# Samprapthi katakas

- Dosha: Vatha, Pitha, Kapha
- Dushya: Rasa, Raktha and Asthi
- Agni: Vishamagni
- Srothas: Annavaha, Rasavaha, Rakthavaha and Asthivaha
- Srothodushti: Sangha
- Adhishtana: Shira kapala
- Sadhyasadyatha: Sadhya

# MATERIALS AND METHODS

#### Table 1: Internal medicines

| S.No | Drug                | Dose   | Duration |
|------|---------------------|--|----------|
| 1    | Vaiswanara choornam | 1 tsp twice daily with hot water before food | 0-7      |
| 2    | Avipathi choornam   | 1 tsp with hot water at bed time             | 0-7 days |
| 3    | Krimigna vati       | 1-0-1 after food                             | 0-7 days |
| 4    | Rajanyadi choorna   | 1 tsp twice daily with honey after food      | 0-7 days |

#### **Table 2: Procedures**

| S.No | Procedure                  | Medicine used  | Duration                           |
|------|----------------------------|--|------------------------------------|
| 1    | Snehapana                  | Cow's ghee   | 8-10 day                           |
| 2    | Abhynga and Ushnambu Snana | Eladi keram  | 11 <sup>th</sup> day               |
| 3    | Virechana                  | Gandravahastha eranda thailam +<br>Milk + Thiphala kashyam | 12 <sup>th</sup> day               |
| 4    | Peyadi kramam              |  | 13-14 <sup>th</sup> day            |
| 5    | Prachana                   | With insulin needle  | On 15th day, 21th day and 28th day |
| 6    | Shiropichu                 | Malathyadi tailam  | Daily from 15th to 28 day          |

Figure 1: 0th day of treatment

Figure 2: 21th day of treatment

Figure 3: 28th day of treatment

#### **RESULTS**

After the treatment

- Healthy hair growth was observed in the previously patchy area.
- The regrown hair appears normal in texture and pigmentation.
- No new patches have developed.
- No side effects or complications noted during the course of treatment.

# **DISCUSSION**

In this case of *Indralupta*, there is involvement of *Tridosha* along with *Rakta*. Genetic, environmental, and stress-related factors caused the derangement of doshas along with an imbalance of *Agni*. This led to the improper development of *Dhatus*, especially *Asthi Dhatu*, as *Kesha* (hair) is considered the *Upadhatu* of *Asthi*. Therefore, treatment was planned based on the principles of *Agni Vardhana*, *Srotoshodhana*, and *Dosha Shamana*, which form the core of *Indralupta Chikitsa*.In this study, *Deepana–Pachana oushadhis* were administered first, followed by *Shodhana oushadhis*. After internal purification, *Rakta Shodhana* was carried out, and then external applications of medicines were given.

## **Internal Medications**

*Vaiswanara Choorna*: The word *Vaiswanara* means *Agni* (fire). All the ingredients in this formulation are *Agni Vardhaka* and mild laxatives. In the initial stage, it helps in *Pachana* of *Doshas* and *Agni Deepana*<sup>[6]</sup>.

**Avipathi Choorna:** Given at night for 7 days, it possesses *Deepana–Pachana* properties essential for *Dosha Shodhana*, especially in conditions involving *Tridosha* vitiation.<sup>[7]</sup>

**Krimighna Vati:** In this condition, there is *Srotodushti* (sanga or blockage of channels), so *Srotoshodhana* is essential. The ingredients support *Agni Deepana* and *Dhatu Poshana* (nourishment of tissues).

**Rajanyadi Choorna:** This formulation has *Deepana* properties and also acts as an immunity booster. Since autoimmune dysfunction is a primary cause of alopecia areata, this medicine was particularly effective in this condition.<sup>[8]</sup>

#### **Procedures**

After *Deepana–Pachana, Shodhana* procedures were performed. As *Purva Karma, Snehana* (oleation) and *Swedana* (sudation) were done to facilitate *Dosha Vilayana* (liquefaction of *Doshas*). *Virechana* was then administered using *Gandharvahastadi Eranda Taila* with milk and *Triphala Kashayam*. This combination possesses *Sookshma Guna* and *Shroto Shodhana* properties, helping it enter the minute channels and purify them.

Prachana Karma (a form of Raktamokshana) was performed in three sittings. Since Rakta Dushti is a significant factor in Indralupta, localized bloodletting helped remove vitiated blood from the site and nourished Rakta Dhatu, acting as a localized Shodhana therapy.

Shiropichu with Malathyadi Taila was applied continuously for 14 days. Shiropichu, one among the Murdhni Taila therapies, is indicated for Kesha shathana (hair fall). Malathyadi Taila, specifically indicated in Indralupta, was used due to its Tikshna and Ushna properties, which help alleviate Kapha dosha at the hair follicles (Roopakupa). Its Sookshma Guna supports Srotoshodhana, and the Taila (oil) form also helps pacify Vata dosha. Shiropichu improves local blood circulation, thus enhancing the nutrition of the scalp and hair roots, promoting healthy hair regrowth. [9]

#### **CONCLUSION**

This case of *Indralupta* was successfully treated using Ayurvedic protocols underlines the *Agni Deepana, Dosha Shamana*, and *Srotoshodhana*. Internal medications helped correct metabolic imbalances, while *Virechana* and *Prachana* eliminated vitiated *Doshas* and *Rakta. Shiropichu* with *Malathyadi Taila* nourished the scalp and stimulated healthy hair regrowth. The case emphasizes the importance of a systematic, and extensive Ayurvedic approach in managing autoimmune conditions like alopecia areata, offering both symptomatic relief and long-term restoration.
